The invention set forth in claims 1 and 3 to 5 involves an inventive step in relation to the documents that are cited in the international search report. The documents in question do not disclose the feature wherein the "neutral position of the reverse shifter is set to a position that has been rotated further towards one side of the actuator rod than the vertical position, while the reverse position of said reverse shifter is set to a position that has been rotated further towards the other side of said actuator rod than the vertical position," and it would not have been easy for even a person skilled in the art to conceive of the feature in question.

The invention set forth in claims 6 and 9 to 14 involves an inventive step in relation to the documents that are cited in the international search report. The documents in question do not disclose the feature wherein "during the shift operations for shifting into the second gear stage, the drive control means controls said actuator so that the shifter is in a position that has been rotated further towards the one side of the actuator rod than the vertical position when positioned at the neutral position of the second gear stage, while also controlling said actuator so that said shifter is in a
